Unlocking Brazilian
e-Commerce

ABOUT ME

I'm Renata Batista, a results-driven Business Development professional with over 10 years of international experience leading high-impact commercial strategies, contract negotiations, and client partnerships across Europe, Latin America, and North America.

Recently, I completed a Data Analytics program, adding strong technical skills in Excel, SQL, Tableau, and Python to my background. I now specialise in combining data-driven insights with strategic business thinking to support smarter decision-making, scalable growth, and operational efficiency.

My unique blend of commercial leadership and analytical expertise allows me to connect the dots between business challenges and actionable solutions—whether through market trend analysis, performance dashboards

PROJECT OVERVIEW

Unlocking Brazilian e-Commerce: Customer Behaviour Delivery Patterns & Sales Trends.

Role: Data Analyst

Tools: Python (Pandas, Seaborn, Scikit-learn), Jupyter Notebooks

Dataset: Olist Brazilian e-Commerce Dataset (Kaggle)

Timeline: 2016 - 2018 Data Coverage

UNLOCKING BRAZILIAN E-COMMERCE

Objective

This project explores Brazil's online retail landscape by analyzing over 100,000 orders from the Olist e-commerce platform. Using Python for data wrangling and exploratory data analysis (EDA), and Tableau Public for interactive storytelling, I built a dashboard that reveals customer behaviors, delivery trends, and product category insights.

The goal: empower business decision-makers to optimize logistics, enhance customer satisfaction, and boost category performance.

Data Sources

- Olist Brazilian E-Commerce Dataset (Kaggle)

Analysis Method & Tools

- Python - Pandas, Numpy, Os, Seaborn, Scikit-learn
- [GitHub repository](#)

CUSTOMER & ORDER BEHAVIOR

01

- Customer segments differ by spending and delivery behaviour
- Cluster suggest distinct buyer types: value-conscious vs. premium buyers, etc.

SALES & CATEGORY TRENDS

01

Show volume growth or seasonality

- Peak order periods identified
- Potential seasonal or promotional spikes
- insight into when to optimise campaigns or logistics

02

Highlights long-term trends or dips (e.g. holidays or campaign impacts)

DELIVERY & REVIEW PERFORMANCE

01 Direct link between delays and satisfaction

02 Does more expensive shipping lead to better delivery timing?

- Delivery delays negatively impact reviews
- Higher product price leads to faster delivery
- Strong correlation between shipping costs and physical attributes

FINAL CONCLUSION

Based on the analysis of Brazilian e-commerce from 2016 to 2018
(dataset)

North/ Northeast

Investing in logistics infrastructure in North and Northeast

Categories

Promote the top-performing Categories during seasonal peaks

Seller

Improve seller onboarding & freight standardization
